ENVIRONMENTAL POLICY

Versión 4 – Mayo 2021

At SLEEP'N Atocha we believe that economic growth and the well-being of society are inextricably linked to the health of the environment. Consequently, we are committed to minimizing the negative impacts of all the activities of our hotel that are generated on the environment.

Since 2019 we are NEUTRAL in carbon.

We actively work on continuous environmental improvement practices aimed at:

- Comply with local, national and international environmental legislation.
- Integrate the best environmental practices on a day-to-day basis that promote the responsible use of energy and water. Minimize energy losses, water pollution and waste.
- Installation of efficient technology when the old one needs to be replaced.
- Incorporate a waste management program to mitigate waste production following this hierarchy: avoid, reduce, reuse and recycle.
- Compensate our carbon footprint
- Apply our product and service purchase policy at all times
- Reduce the consumption of dangerous chemicals with the use of hydrolysis.

We create awareness and inspiration for the personal and professional life of our clients, employees and collaborators:

- Internal communication, delegation and education. All the hotel team members are encouraged to work in an environmentally responsible manner. They are given a copy of the environmental policy, offered to represent their department in the hotel's Green Team and receive continuous training to improve their daily practices.
- External communication, contribution and education. Customers, suppliers, authorities, local community and business partners are invited to be part of our environmental program. We communicate to them what we are doing, why we are doing it and how they can be part of it. And they are given the option of contributing to the reforestation of Madrid.

We work through the commitment of:

- Establish objectives in energy and water consumption, waste management and in our purchasing policy. Communicate these goals regularly to stakeholders.
- Analyze the achievements monthly and compare them with our objectives
- Keep record and inform about our environmental management
